SUMMARY

Backend-oriented software engineer with a strong focus on Java and Spring Boot, aiming to start as a Backend Developer and gradually evolve into a Fullstack Developer. Seeking opportunities to contribute to real-world backend systems while continuously improving frontend skills to deliver end-to-end solutions.

TECHNICAL SKILLS

Backend: Java, Spring Boot, Servlet, RESTful APIs, Spring Security, JWT

Frontend: HTML, CSS, JavaScript, ReactJS

Database: PostgreSQL, SQL Server

Tools & Practices: Git, Postman, Exception Handling, DTO mapping, Unit Testing

PROJECTS

Human Resource Management System (5 members)

Dec 2025 – Mar 2026

Backend Developer

Spring Boot, PostgreSQL, JWT, RESTful APIs

- Developed a system to manage **employee records** across the company.
- Implemented **JWT authentication** with **Role-Based Access Control** (3 roles) and OAuth2 login via Google.
- Built CRUD APIs supporting advanced filtering and pagination.
- Designed the relational database utilizing PostgreSQL and JPA/Hibernate for schema management.
- Configured method-level security and restricted endpoint access based on user roles (Manager, HR, Mentor).

E-commerce SportShop (5 members)

Sep 2025 – Nov 2025

Backend Developer

Java, JSP/Servlet, SQL Server, MVC Architecture

- Implemented the **MVC architecture** utilizing Servlets for request routing and JSP for dynamic view rendering.
- Designed the relational database and interacted with it using **JDBC** and the **DAO pattern** to ensure secure and optimized data queries.
- Configured role-based access control (Admin vs. Customer) to secure administrative endpoints and prevent unauthorized data access.

EDUCATION

FPT University

Bachelor of Engineering in Software Engineering

Hanoi, Vietnam

2023 – Present
